The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 7, 8, 13 and 14 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Frank et al (US 4,303,567).

Frank et al teach an aqueous unsaturated polyester composition comprising the instant oil-soluble peroxide and AIBN initiator in tables on cols. 6 & 7 (lacquer examples 1 and 6). Said oil-soluble peroxide initiators and AIBN are taught at col. 2, lines 1-19, and said oil-soluble initiators are inherently presented in said unsaturated polyester of emulsion since they are compatible and water and said oil-soluble initiators are in compatible. Said unsaturated polyester has an acid number of 1-40 and OH number of 10-100 (col. 4, lines 48-52) and possesses the instant saponification value inherently. Sealing agents such as waxes are taught at col. 5, line 5. Note that any known compositions such as comparative examples of Frank et al still meet the invention.

Thus, the instant invention lacks novelty.

Art Unit: 1714

Claims 1-3, 7-9 and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Frank et al (US 4,303,567) and Faler et al (US 5,830,928).

Claim 9 further recites removal of an organic solvent from a polymerized unsaturated polyester. However, such removal of an organic solvent from a polymerized unsaturated polyester is well known in the art as taught by Faler et al, col. 15, line 66 to col. 16, line 6.

It would have been obvious to one of ordinary skill in the art at the time of the instant invention to remove an organic solvent from a polymerized unsaturated polyester of Frank et al with teaching of Faler et al since such removal of an organic solvent from the polymerized matrix is a routine practice in the art.

Claims 4-6, 10 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
